EXAMINER'S STATEMENTS OF REASONS FOR ALLOWANCE

1. Claims 1-18 are allowable over prior art because related references do not disclose an L-chip accumulator for generating an intermediate correlation signal from samples created by an oversampling rate which is N-fold of chip rate and a controller for controlling the supply of correlation signals to the adder, via a multiplier, in the same time period when the correlation signals are supplied to the memory which reduces the size of the circuit by avoiding the use of a large shift register for timing purposes.

Conclusion

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Curtis B. Odom whose telephone number is 571-272-3046. The examiner can normally be reached on Monday- Friday, 8-5.
